How I do it: Laparoscopic PPPD

Akihiro Cho

Chiba Cancer Center Hospital, Japan

Background

Although many reports have described laparoscopic pancreatic surgery, laparoscopic pancreaticoduodenectomy (Lap-PD) is still not universally accepted as an alternative approach for open surgery.

Purpose

We here review our experience with laparoscopic pylorus-preserving pancreaticoduodenectomy (Lap-PPPД).

Non-randomized comparative studies of Lap and open pancreaticoduodenectomy

A Case-Match Control Study in pancreatic ductal adenoca. (PDAC)

Twenty patients who underwent Laparoscopic pancreatic resection for PDAC were age, BMI, gender, surgical procedure, and preoperative stage-matched with 22 patients treated by open surgery in the same period.

Clinical characteristics of patients

	LPD(n=20)	OPD(n=22)	P
Age ^a	55-84(69.4)	55-78(68.7)	0.939

Resection

Treitz Ligament Approach

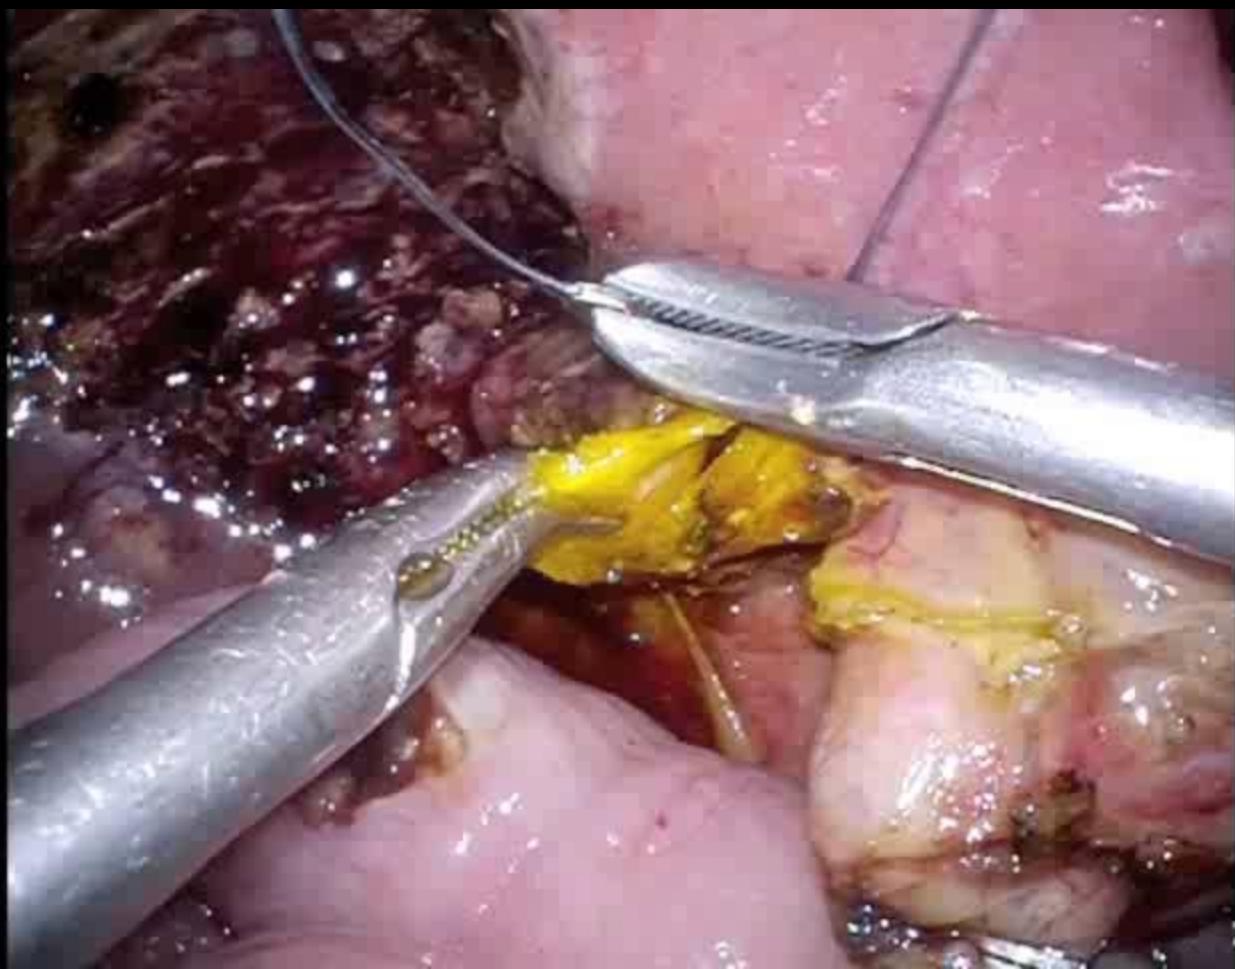

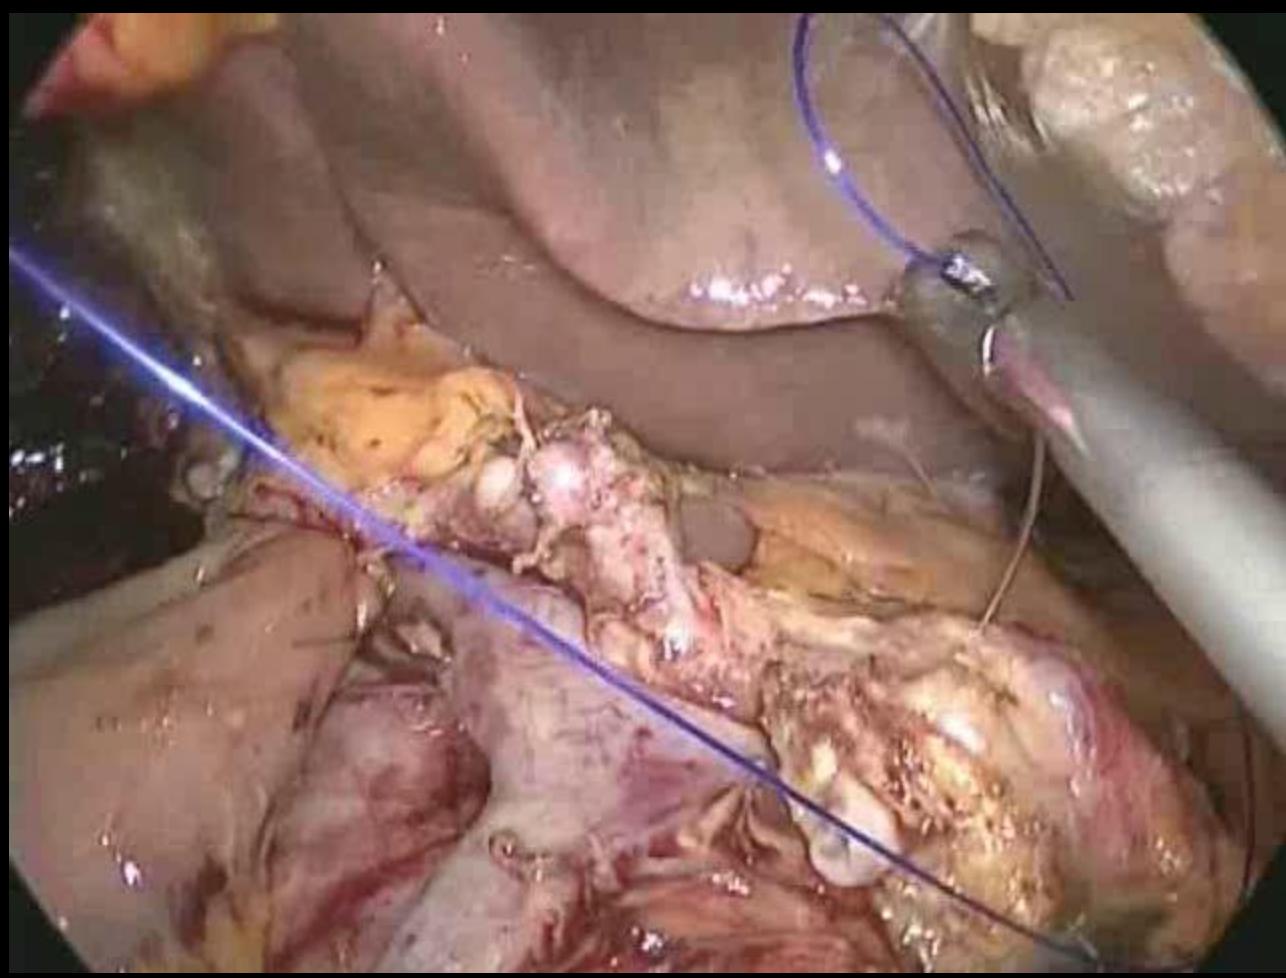

Reconstruction

Choleducho- Jejunostomy

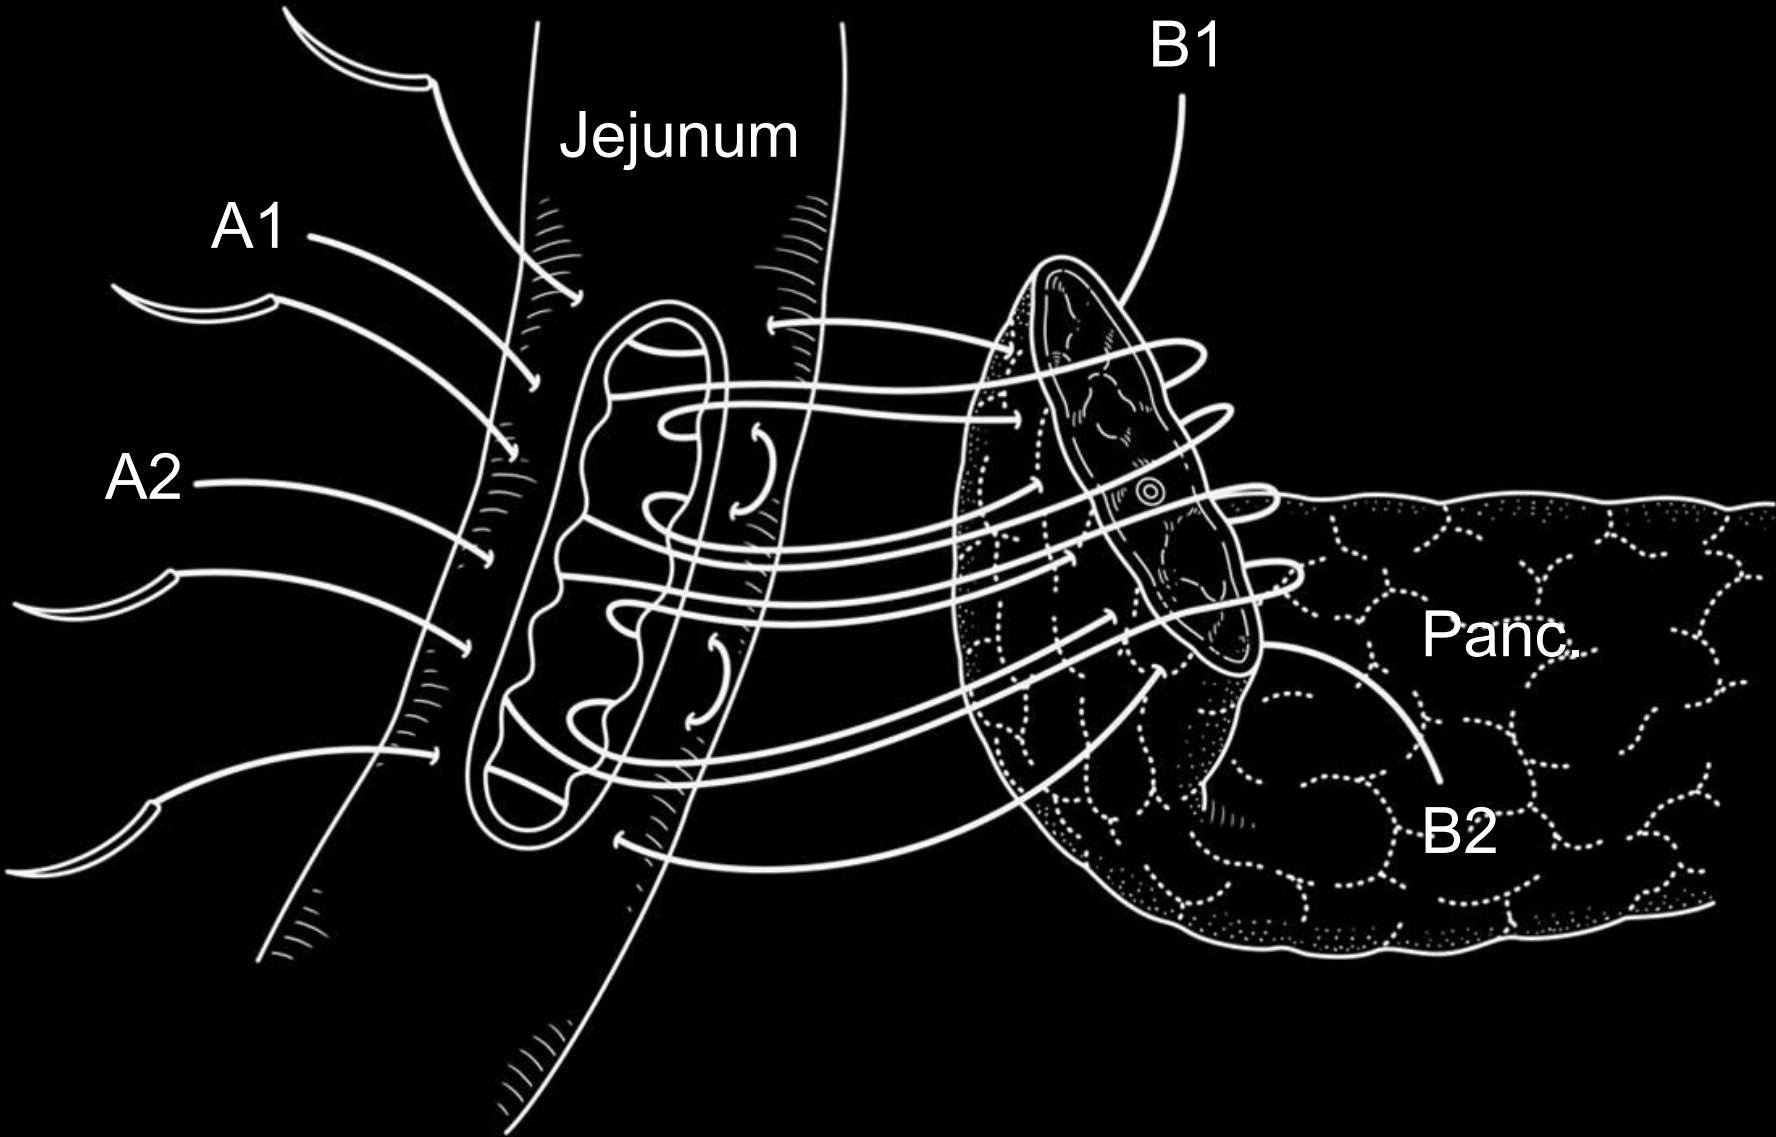

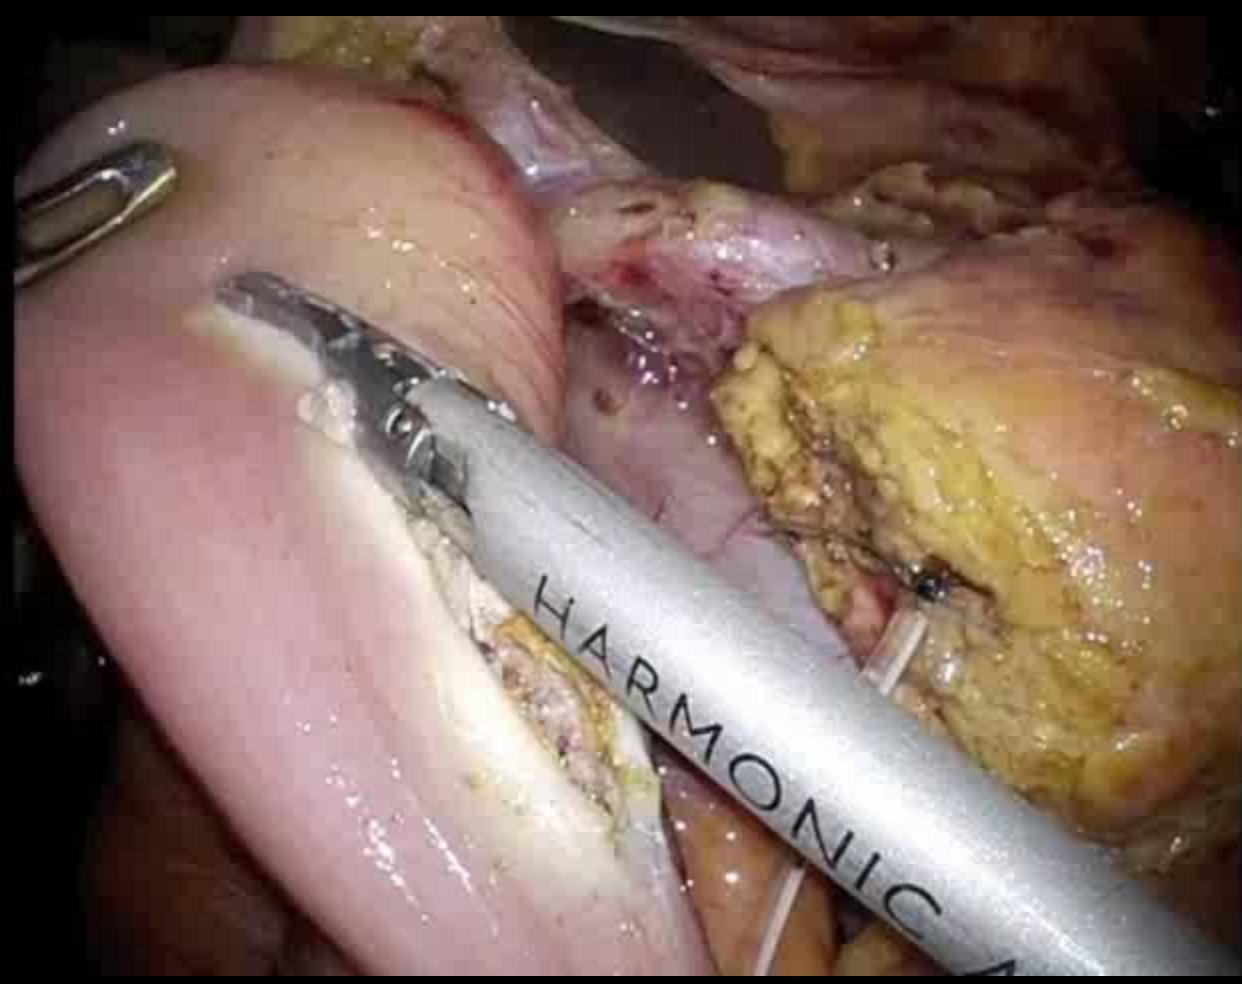

Pancreatico- Jejunostomy

Duct-mucosa+Kakita Method

Mattress Dumping Method

Mattress Dumping Method

15 consecutive patients with a soft pancreas and a non-dilated pancreatic duct underwent dunking PJ using mattress sutures.

According ISGPF criteria, three patients developed Grade A, while the remaining 12 patients did not.

Summary

Lap-PPPD can be feasible, safe, and effective in carefully selected patients.

Treitz ligament approach is useful to do SMA First and early ligation of IPDA.

Mattress dunking method is safe in patients with a soft pancreas.

A scenic landscape featuring Mount Fuji in the background, its peak covered in snow. In the foreground, branches of cherry blossoms (pink flowers) are in full bloom, hanging over a body of water. The sky is clear and blue.
